

Calculus Homework #6

Problem 8.8

In general, to prove that the two-variable limit does not exist, it is enough to find two different limits for two different paths.

Subproblem A

$$\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} \frac{x^3 - y}{x^3 + y}$$

For $y = mx^3$:

$$\lim_{x \rightarrow 0} \frac{x^3 - mx^3}{x^3 + mx^3} = \lim_{x \rightarrow 0} \frac{1 - m}{1 + m} = \frac{1 - m}{1 + m}$$

The limit is dependent on $m \Rightarrow m \Rightarrow$ the limit does not exist.

Subproblem B

$$\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} \frac{xy}{x^2 + y^2}$$

For $y = mx$:

$$\lim_{x \rightarrow 0} \frac{x \cdot mx}{x^2 + m^2 x^2} = \lim_{x \rightarrow 0} \frac{mx^2}{(1 + m^2)x^2} = \lim_{x \rightarrow 0} \frac{m}{1 + m^2} = \frac{m}{1 + m^2}$$

The limit is dependent on $m \Rightarrow m \Rightarrow$ the limit does not exist.

Subproblem C

$$\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} \frac{y^2 - x^2}{y^2 + x^2}$$

For $y = mx$:

$$\lim_{x \rightarrow 0} \frac{m^2 x^2 - x^2}{m^2 x^2 + x^2} = \lim_{x \rightarrow 0} \frac{m^2 - 1}{m^2 + 1} = \frac{m^2 - 1}{m^2 + 1}$$

$$x \rightarrow 0 \lim_{y \rightarrow 0} \frac{y^2 - x^2}{y^2 + x^2} = x \rightarrow 0 \lim_{m \rightarrow 0} \frac{m^2 - 1}{m^2 + 1} = \lim_{m \rightarrow 0} \frac{m^2 - 1}{m^2 + 1} = -1$$

The limit is dependent on $m \Rightarrow m \Rightarrow$ the limit does not exist.

Subproblem D

$$\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} \frac{x^2 y^2}{x^2 y^2 + (x - y)^2}$$

For $y = x$:

$$\lim_{x \rightarrow 0} \frac{x^2 x^2}{x^2 x^2 + (x - x)^2} = \lim_{x \rightarrow 0} \frac{x^4}{x^4} = \lim_{x \rightarrow 0} 1 = 1$$

$$x \rightarrow 0 \lim_{y \rightarrow 0} \frac{x^2 y^2}{x^2 y^2 + (x - y)^2} = x \rightarrow 0 \lim_{x \rightarrow 0} \frac{x^4}{x^4} = x \rightarrow 0 \lim 1 = 1$$

For $y = 0$:

$$\lim_{x \rightarrow 0} \frac{x^2 0^2}{x^2 0^2 + (x - 0)^2} = \lim_{x \rightarrow 0} \frac{0}{x^2} = \lim_{x \rightarrow 0} 0 = 0$$

$$x \rightarrow 0 \lim_{y \rightarrow 0} \frac{x^2 y^2}{x^2 y^2 + (x - y)^2} = x \rightarrow 0 \lim_{y \rightarrow 0} \frac{x^2 0^2}{x^2 0^2 + (x - 0)^2} = x \rightarrow 0 \lim \frac{0}{x^2} = x \rightarrow 0 \lim 0 = 0$$

This should be enough, but in case you can't go along $y = 0$, a different option for $y = kx$, $k \neq 1$:

$$\lim_{x \rightarrow 0} \frac{k^2 x^4}{k^2 x^4 + (1 - k)^2 x^2} = \lim_{x \rightarrow 0} \frac{x^2}{x^2 + \frac{(1 - k)^2}{k^2}} = \lim_{x \rightarrow 0} \frac{0}{0 + \frac{(1 - k)^2}{k^2}} = 0$$

$$x \rightarrow 0 \lim k 2x^4 + (1 - k) 2x^2 k 2x^4 = x \rightarrow 0 \lim x^2 + k 2(1 - k) 2x^2 = x \rightarrow 0 \lim 0 + k 2(1 - k) 20 = 0$$

There are at least two different limits for two paths $y = x$, $y = 0 \Rightarrow y = x, y = 0 \Rightarrow$ the limit does not exist.

Subproblem E

$$\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} \left(x + y \sin \frac{1}{x} \right)$$

$$x \rightarrow 0 y \rightarrow 0 \lim (x + y \sin x)$$

$f_1(x) = \sin \frac{1}{x} \in [-1, 1]$ $f_1(x) = \sin x \in [-1, 1]$ is a bounded function. $f_2(y) = y$ as $y \rightarrow 0$ $y \rightarrow 0$ is an infinitesimal function. Product of a bounded function and an infinitesimal function is infinitesimal. Therefore, $\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} g(x, y) = \lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} f_1(x) f_2(y) = 0$ $\lim_{x \rightarrow 0} y \rightarrow 0 g(x, y) = \lim_{x \rightarrow 0} f_1(x) f_2(y) = 0$

$$\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} \left(x + y \sin \frac{1}{x} \right) = \lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} x + \lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} y \sin \frac{1}{x} = \lim_{x \rightarrow 0} x + \lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} g(x, y) = 0 + 0 = 0$$

$$x \rightarrow 0 y \rightarrow 0 \lim (x + y \sin x) = x \rightarrow 0 y \rightarrow 0 \lim x + x \rightarrow 0 y \rightarrow 0 \lim y \sin x = x \rightarrow 0 \lim x + x \rightarrow 0 y \rightarrow 0 \lim$$

$$g(x, y) = 0 + 0 = 0$$

Answer:

$$\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} \left(x + y \sin \frac{1}{x} \right) = 0$$

$$x \rightarrow 0 y \rightarrow 0 \lim (x + y \sin x) = 0$$

Problem 8.9

Find limit of $f(x, y) = \frac{y - 2x^2}{y - x^2} f(x, y) = y - x^2 y - 2x^2$ in point $(0, 0)$ along the path $x = \alpha t, y = \beta t, \alpha^2 + \beta^2 \neq 0$ $x = \alpha t, y = \beta t, \alpha^2 + \beta^2 \neq 0$. Prove that $\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} f(x, y) \lim_{x \rightarrow 0} y \rightarrow 0 f(x, y)$ does not exist.

$$\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} \frac{y - 2x^2}{y - x^2} \quad \Rightarrow \quad \lim_{t \rightarrow 0} \frac{\beta t - 2\alpha^2 t^2}{\beta t - \alpha^2 t^2} = \lim_{t \rightarrow 0} \frac{\beta - 2\alpha^2 t}{\beta - \alpha^2 t} = \lim_{t \rightarrow 0} \frac{\beta - 0}{\beta - 0} = \lim_{t \rightarrow 0} 1 = 1$$

$$x \rightarrow 0, y \rightarrow 0 \lim y - x^2 y - 2x^2 \Rightarrow t \rightarrow 0 \lim \beta t - \alpha^2 t^2 \beta t - 2\alpha^2 t^2 = t \rightarrow 0 \lim \beta - \alpha^2 t \beta - 2\alpha^2 t = t \rightarrow 0 \lim \beta - 0 \beta - 0 = t \rightarrow 0 \lim 1 = 1$$

For $y = mx^2$ $y = mx^2$:

$$\lim_{x \rightarrow 0} \frac{mx^2 - 2x^2}{mx^2 - x^2} = \lim_{x \rightarrow 0} \frac{m - 2}{m - 1} = \frac{m - 2}{m - 1}$$

$$x \rightarrow 0 \lim mx^2 - x^2 mx^2 - 2x^2 = x \rightarrow 0 \lim m - 1 m - 2 = m - 1 m - 2$$

Thus, the multivariable limit does not exist.

Answer: $\lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} \frac{y - 2x^2}{y - x^2} = 1 \lim_{x \rightarrow 0, y \rightarrow 0} y - x^2 y - 2x^2 = 1$ along the path of $x = \alpha t, y = \beta t, \alpha^2 + \beta^2 \neq 0$

$$x = \alpha t, y = \beta t, \alpha^2 + \beta^2 \neq 0$$

Problem 8.10

Is the function

$$u(x, y) = \begin{cases} \frac{xy}{x^2 + y^2}, & \forall x, y: x^2 + y^2 \neq 0 \\ 0, & \forall x, y: x^2 + y^2 = 0 \end{cases}$$

$$u(x, y) = \begin{cases} \frac{xy}{x^2 + y^2}, & \forall x, y: x^2 + y^2 \neq 0 \\ 0, & \forall x, y: x^2 + y^2 = 0 \end{cases}$$

continuous in point $(0, 0)$?

$$u'(x, y) = \frac{xy}{x^2 + y^2}$$

$$u'(x, y) = \frac{xy}{x^2 + y^2}$$

Per the continuity criterion: for $u(x, y)$ to be continuous in point of closure $(0, 0)$ it is required and sufficient that $u(0, 0) = \lim_{\substack{x \rightarrow 0 \\ y \rightarrow 0}} u'(x, y)$. This limit of $u'(x, y)$ is

as proven in **Problem 8.8, Subproblem B** does not exist and **takes different values depending on the path**. Therefore, $(0, 0)$ is not the point of closure and the function $u(x, y)$ is not continuous.

Answer: $u(x, y)$ is not continuous
